

Lower the cost of ownership for your ADTS fleet.

PACE Tallis is Druck's new transfer standard calibrator, ideal for use as a reliable calibrator for ADTS pitot static testers and avionic instrumentation.

Druck's ADTS pitot static testers require accurate calibration to ensure RVSM compliance. Traditionally, users need to send their ADTS for servicing, meaning a loss of operation when in transit. Using PACE Tallis as a portable, in-house calibrator reduces calibration time to a matter of hours, as opposed to weeks.

- Extended calibration period for ADTS
- Reduced calibration cost, downtime and shipping
- Precision 5 ppm typical
